Transition to middle income: Real Estate to grow ~2x faster than the Indian economy

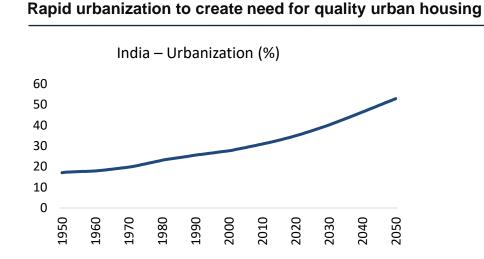

Housing to be key driver of and key beneficiary from GDP growth

75-100 mn new households to become 'home ownership capable' this decade

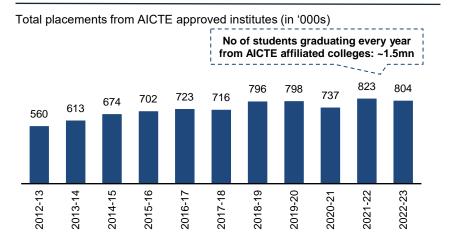

Even assuming significant industry supply growth¹, supply is likely to be <10 mn units. Once in a country's lifetime opportunity!

Strong affordability drives conversion of housing need to demand

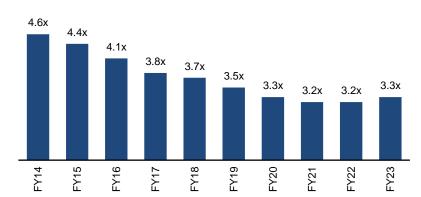

Large no of educated workforce added every year

As long as housing price growth is slightly below white collar wage growth, housing demand will grow sustainably

Improved affordability to support demand

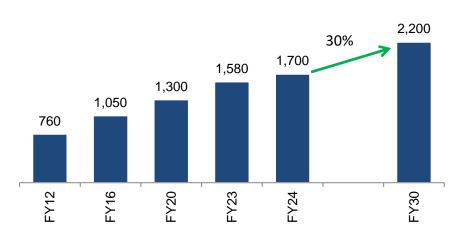

Family nuclearization

Affordability ratio¹

Robust job creation to sustain housing demand

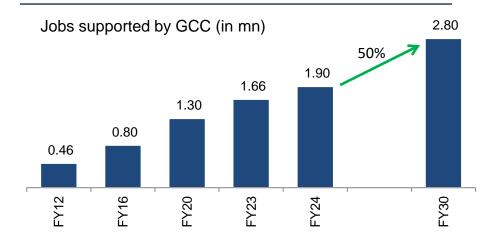

Increasing presence of GCC¹ in India....

Large BFSI GCCs also increasing their presence: One of the largest US bank has nearly doubled its presence in India

'000 headcount

...has led to robust job creation, more than offsetting slowdown in hiring by IT services companies

Manufacturing job creation led by PLI² capex

Capex outlay under PLI scheme (INR bn)

Supply side consolidating - unlikely to keep pace with accelerating demand

▶ 60% Developers count
>50%
Incremental supply from branded developers

Consolidation wave due to policy reforms and liquidity crisis...

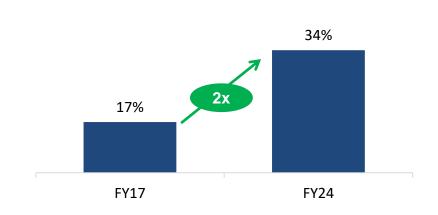

Remaining Tier - 2 & 3 players develop:

- ✓ Small-sized projects (< INR 5bn)
- One at a time
- ✓ Take longer (5-7 years) to complete

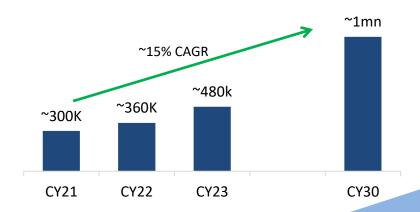

Multiple forces leading to consolidation

- ✓ Regulatory push: RERA, Demonetization, GST, Amendment to Benami Act.
- ✓ Funding squeeze for Tier -2 & 3 developers:
 - NBFC's exiting market after large losses wholesale lending bubble popped after IL&FS implosion
 - Inability to sell during construction
- $\checkmark\,$ Consumer loss of confidence with Tier 2 & 3 developers:
 - Having burnt their lifetime savings
 - Failure to deliver or untimely delivery with poor quality

...has led to market share gains for listed and leading non-listed developers

'Housing' increasingly becoming a branded 'Consumer Product'

Brand matters the most Consumed over decades Highest Investment value in lifestyle purchase upgrade of life **Branded home** Tool for Provides aspirational wealth address creation Provides quality assurance over long period

Steady as it goes: Mortgage an enabler, not inducer of demand

- Conservative Central Bank, low risk mortgage market: LTV < 85%, no teaser rates
- ✓ Rate cycle seem to have peaked, pivot likely in CY25
- Strong performance of mortgages through all parts of the cycle -Intense competition for safe haven mortgage assets leading to plentiful availability
- A floating rate product; rate cycle well understood by homebuyers. Interest rate change modifies tenure, not EMI
- ✓ Salary growth of 8-10% enables mortgage repayment in 7-8 years

Low penetration of mortgage provides significant room for growth

Housing sales driven by fundamental need and nominal price growth, not by mortgage inducement Homebuyers prepaying mortgages, showing mortgage not a significant contributor to demand

Low risk to margins from construction cost inflation

- ✓ Construction costs typically forms 25% to 45% of the sales price
 - Of which, one-third is related to low skilled and semi-skilled labor: plentiful supply through migration from rural areas (250+ mn people estimated to be 'underemployed' in agriculture). Hence, labour inflation is low and keep inflation from being 'sticky'
- Commodity inflation, though often sharp, generally of short cycles as demand and supply adjust to new normal, bringing price moderation in the short term
 - Spurt in commodity price due to Russia-Ukraine war has reversed
- ✓ ~3 year period of construction provides flexibility to manage costs across the project lifecycle
- ✓ Ready and advance under-construction inventory provides hedge against the commodity price inflation
